The order form provides you with a reserved copy of this resource. Price: \$25.00

Text Description:

Epidemiology and Prevention of Vaccine-Preventable Diseases

Since the publication of the 6th Edition of this text, much has happened in the field of immunization and public health. This text discusses those changes in immunization and the impact of biologic weapons into the field of public health readiness. All chapters have been reviewed and updated and new chapters on 'Smallpox' and 'Anthrax' have been added. This text is one of the most authoritative resources on immunization and strategies for improving immunization rates.
